

# PLAZA ENTRANCE ON FRONT STREET

## Steelton Town Center

Existing Streetscape

The master plan attempts to achieve strong visual sight lines by the creation of a central open space. Strong visual axes are created from the plaza space to Borough Hall and north and south from the plaza to the rear access corridors of the proposed buildings.

The effort is to utilize the Front Street corridor and the central plaza across from Borough Hall to make it easy to find the center of the project and then identify all or most of the major components (retail, parking, office) from that central point of orientation.
